- 2009 Oracle Global Partner Award
- 2009 & 2007 Oracle Titan Award

### Staffing Agency's Business Challenges

Extremely high maintenance costs for underutilized Unix mainframe servers were costly inefficiencies at a Staffing Agency needing to invest in business expansion. Core applications include Peoplesoft and WebCenter Portal. The current system performed acceptably, but concern that older systems would not scale to match future business growth.

### Cloud Creek's Solution

Cloud Creek recommended moving older, costly and non-scalable systems to multiple Oracle Database Appliances to host Oracle production systems. They collaborated with IT on a consolidation and migration plan to minimize risk and downtime. Capacity planning workshops were held with business and IT leaders to understand current and future requirements for business systems performance, flexibility, reliability and scale.

### Staffing Agency's Benefits

Business value included elimination of artificial limits on future business growth by modernizing infrastructure. Significant budget savings for yearly maintenance was re-focused on business expansion into new markets and industries.

Technical value included infrastructure refresh to ensure scalability for future business growth. New HA system deployed in less than 2 months, showing a win for IT in being responsive to business stakeholders.

### Why Cloud Creek

Cloud Creek employed deep knowledge of the complete engineered systems product line and technology stack. Understood business challenges and financial pressures common to small and mid-market business. Provided specialized knowledge and experience to design and size complete system solution.
